Abstracts

The North America Healthcare Supply Chain Management Market would witness market growth of 6.5% CAGR during the forecast period (2019-2025).

Numerous functions of healthcare suppliers, such as sales data analysis, price alignment, inventory management, and implantable product supply chain management, and master data management can be streamlined with the use of supply chain management software for healthcare. These solutions provide and derive accurate information about the market and help to make critical business decisions. Pricing disparities, commission overpayment, and distributor rebates can also be minimized through the use of such approaches.

The primary pharmaceutical distributors and GPOs need supply chain management tools and technologies (software/hardware) to facilitate effective communication between manufacturers and providers. Efficient management of inventories is a necessity in GPOs, as they store products in warehouses. Due to frequent movement of goods, the monitoring and tracing of goods in these warehouses is very important for this category of end users. Most pharmaceutical manufacturers and GPOs often enter into collaborations with supply chain management service providers to better manage the inventory.
