Abstracts

The North America Hyper-Converged Infrastructure Market would witness market growth of 31.8% CAGR during the forecast period (2019-2025).

Hyper-converged infrastructure is provided as an appliance, as reference architecture or as model-based software only. Bundled features like compression, data deduplication, WAN optimization, data protection, snapshots, and backup/disaster recovery classify offerings by vendors. HCI hardware typically comes as an integrated appliance, a software/hardware package that is created and distributed by a single vendor. Some of the top vendors of the appliances are Dell EMC, Nutanix and HPE/SimpliVity. Appliance-based HCI is available across the market in the ready-to-use form, offering vendor-guaranteed levels of performance and requiring only limited installation and configuration work.

The increased the need for scalable infrastructure and increasing demand for architectures that can manage heavy workloads, like business analytics and big data tools, altogether work as key drivers in the growth of the global hyper-converged infrastructure market. Major business leaders push companies to embrace software-centric architecture that lets them incorporate, process, and store in a single suite. This encouraged leading virtualization providers to move towards hybrid cloud solutions to help their customers migrate transactional workloads to the public cloud and execute heavy workloads, typically mission-critical on-premise.

Based on Component, the market is segmented into Software and Hardware. Based on Organization Size, the market is segmented into Large Enterprises and Small & Medium Enterprises. Based on Application, the market is segmented into Data Center Consolidation, Virtual Desktop Infrastructure (VDI), Backup/Recovery/Disaster Recovery, Remote Office Branch Office (ROBO), Virtualizing Critical Applications and Others.
