Intelligent transportation system is an integration of communication system and information technologies, designed primarily for improving safety, security and efficiency in transportation network. It is an advanced system form of system that would eventually gain over traditional form of transportation systems. Advancing metropolitan areas are leading to space congestions within the city limits, and number of vehicles hitting roads is on the increase by the day. Reducing transportation network expansion space and increasing number of vehicles in metropolitan areas have caused immense pressure on authorities and called for improving performance of existing transportation network.

The North America intelligent transportation system (ITS) market size, in terms of value, is expected to reach a market size of USD 26,309.69 Million by 2022, at a CAGR of 7.6% between 2016 and 2022. Railways, the backbone of the transportation systems in different regions, is evolving by the day and is growing increasingly complex. The adoption of railway intelligent transportation system (RITS) will be a step towards gaining competitive edge over other modes of transportation. By implementing various intelligent techniques, the need for consumer safety can be smartly managed within this mode of transportation.

The developing regions have many impediments to growth, and road traffic jams have and will be a major problem causing massive delays, increased fuel wastage and monetary losses. The fast changing regional landscape has led to poorly planned road networks. Due to unplanned road networks, small critical areas become the hot-spots for congestion and ineffective and poor traffic management around these hotspots potentially results in extended traffic jams. Privatizations of highways and road pricing have been some initiatives proposed to reduce congestion.

Roadways segment dominated the North America ITS market in 2015. The segment generated revenue of USD 6,765.1 Million in 2015. Aviation on the other hand is expected to register a highest CAGR of 12.0% during the forecast period (2016-2022) thereby achieving a market size of USD 7,366.7 Million by 2022. Railways is expected to grow at a CAGR of 5.1% during the forecast period. The Maritime segment would witness a growth of 11.1% CAGR from time period 2016 – 2022 thereby achieving a market value of USD 4,472.6 Million by 2022.
