## **Abstracts**

The North America Irrigation Automation Market would witness market growth of 21.3% CAGR during the forecast period (2020-2026).

Irrigation is basically the process of applying a regulated amount of water to crops or plants. In automatic irrigation, devices are used to operate irrigation structures without the need for manual interaction. Automatic irrigation is helpful in reducing labor and also improve the lifestyle. It offers apt irrigation, helps in the management of the higher rate of flow, more precise cut-off, a decrease of runoff of water and nutrients, and a decrease of cost for vehicles that are used for irrigation.

Growing awareness among farmers about the benefits of implementing irrigation automation systems is one of the strong contributors to the growth of the market. Though, factors including the high cost associated with the setting up of an irrigation system and dearth of suitable infrastructure might hamper the market growth over the foreseeable period. Moreover, extended penetration of solar-powered irrigation systems owing to its low fuel costs and the least requirement for maintenance will possibly help the market expansion over the coming years.

The automation of the prevailing irrigation process has made the whole agricultural activities more effective. It also supports farmers and growers to contribute to the conservation of water and energy. To adjust the occurrence of irrigation and fertigation processes, and for this power on/off of irrigation process is required. This results in improving energy requirements, and the automated system can be operated anytime ensuing in minimal water loss. These are some of the advantages of advanced irrigation systems that make them more adaptable among the farmers. The irrigation systems are further automated into time-based systems, open-loop systems, volume-based systems, real-time feedback systems, closed-loop systems, and computer-based irrigation control systems that are making agricultural activities more effective and efficient.

Based on Application, the market is segmented into Agricultural and Non-Agricultural. Agricultural Segment is further classified across Open Fields and Greenhouses & Others. Based on Irrigation Type, the market is segmented into Drip Irrigation, Sprinkler Irrigation and Surface Irrigation & Others. Based on Type, the market is segmented into Time-based, Volume-based, Realtime-based and Others. Based on Component, the market is segmented into Controllers, Sensors, Valves, Sprinklers and Others.
