Abstracts

Medical imaging informatics (MII) is a subspecialty of biomedical informatics and it aims at providing accurate, useful, and efficient interpretations of complicated images by converting the images into simpler, communicable, and in a useful manner. The technology is largely used in health care IT sector, especially by radiologists. Medical imaging informatics is comprised of application, development, and assessment of information which are then used to treat patients effectively.

Medical imaging informatics has been widely adopted as a predominant tool in picture archiving and communication system (PACS) and radiology information system (RIS). Today however it is also used in cardiology, dermatology, pathology, and surgery, where digital images are largely in use. The adoption of medical imaging informatics allows tele consultation, which has several advantages such as online consultation among doctors over medical records and effective knowledge sharing among professionals. The growth in the medical imaging informatics market in these regions can be attributed to factors such as increase in demand for medical informatics technology, rapid adoption of technological advanced healthcare IT systems, well-established healthcare infrastructure, and presence of major players in these regions.

The market is segmented based on Component, Deployment Types, End-user, Application and Country. Based on Component, the market is segmented into software, hardware and services. Based on Deployment Types, the market is segmented into Web based, On Premise and Cloud. Based on End-User, the market is segmented into hospitals, diagnostics centers, ambulatory healthcare settings and others. Based on Application, the market is segmented into Digital Radiography, Ultrasound, Magnetic Resonance Imaging, Computed Tomography, Nuclear Imaging and Others.

Based on country, North America Medical Imaging Informatics market is segmented into US, Canada, Mexico, and Rest of North America.
