Abstracts

The North America Microcrystalline Cellulose Market would witness market growth of 5.8% CAGR during the forecast period (2019-2025).

Microcrystalline cellulose is a sheer result of depolymerisation of cellulose, a crystalline powder made of natural cellulose that is odourless and tasteless. The MCC products can be used as pharmaceutical excipients and tablet disintegrating agents in the pharmaceutical industry. MCC can be used as a significant base material in functional foods in the food industry and is an essential additive to healthy foods. In addition, by using its thixotropic and thickening properties, MCC can be used as thickeners and emulsifiers of water-based coatings in the paint industry. In cosmetics, MCC has a blend of filler, thickening, and emulsifying effects in itself, and the oily material has a very good emulsifying ability. So it can be seen that MCC has a broad variety of uses and will move ahead to boost regional demand for the product.
