## Abstracts

The North America Nanofiltration Membrane Market would witness market growth of 4.6% CAGR during the forecast period (2019-2025).

The membranes are essential to nanofiltration systems efficiency. They are made of a variety of components, including cellulose derivatives and synthetic polymers, inorganic materials, particularly ceramics, and organic/inorganic hybrids, in plate and frame formats, spiral wound, capillary, tubular, and hollow fiber formats. Recent nanofiltration membrane advances have expanded their capacities considerably in very high or low pH environments and their implementation to non-aqueous liquids. In more aggressive settings, plastic media are extremely cross-linked, providing long-term stability and practical lifetime. These membranes tend to have a mildly loaded surface with an adverse load at a neutral pH. This surface load plays a significant part in the membrane's transport system and separation characteristics.

Based on Product Type, the market is segmented into Polymeric, Inorganic and Hybrid. Based on Application, the market is segmented into Water & Wastewater Treatment, Food and Beverages, Chemical & Petrochemicals, Pharmaceutical & Biomedical and Others. Based on countries, the market is segmented into U.S., Mexico, Canada, and Rest of North America.
