Abstracts

The North America Neutropenia Treatment Market would witness market growth of 5.5% CAGR during the forecast period (2020-2026).

Neutropenia can compromise optimal cancer treatment by increasing, delaying, or even discontinuing the dose of chemotherapy. Such dose modifications are often made during the initial stages of chemotherapy, as neutropenic symptoms frequently occur early in the process of chemotherapy. Treatment response often depends on the delivery of standard chemotherapy doses, and changes in dosing may threaten complete response rates and reduce survival. Caregivers, therefore, face the challenge of maintaining adequate chemotherapy doses while managing neutropenic complications. The evaluation of chemotherapy-induced neutropenia is gaining significance.

Children often experience fever with severe neutropenia. They are given antibiotics to combat infection as they do, so they will need to be Retailized. Repeated use of antibiotics can, however, have side effects such as the production of drug-resistant bacteria, diarrhea or enterocolitis, and inflammation of the intestines. Some antibiotics may have adverse effects on the function of the kidney and liver.

New medications have been designed to support the bone marrow to produce neutrophils and improve the body's protection against infection. These drugs are referred to as granulocyte colony-stimulating factors. They help keep neutrophils in the blood above the level of danger all or most of the time. The shorter the time the

neutrophil count is low, the less likely your child will develop a fever or infection. These drugs can reduce the amount and seriousness of infections and reduce Retailizations.

Based on Distribution channel, the market is segmented into Retail pharmacies, Hospital pharmacies and Online pharmacies. Based on Treatment, the market is segmented into Colony-stimulating factor, Antibiotics, Antifungals and Antivirals. Based on countries, the market is segmented into U.S., Mexico, Canada, and Rest of North America.
