Abstracts

The North America Optical Character Recognition Market would witness market growth of 11.9% CAGR during the forecast period (2019-2025).

Optical character recognition is generally used for transforming hard copy into PDFs. Once the data is placed in a soft copy, users can edit, format, and search the document just the way they work on word processor files. Mobile OCR technology has evolved to involving several home use cases. Whether electricity or natural gas, one can even use mobile OCR to read their meters. They only need to take readings when the ownership of a meter is changed. In addition, taking regular readings helps you to monitor and reduce unnecessary usage. One of the more surprising adaptations of OCR to the mobile world is the practice of scanning vouchers and promotional codes on the packets of groceries and other produce. As they let clients use an Anyline-based app to scan advertising codes for awards and giveaways, a number of businesses have been successful with this.
