Abstracts

The North America Pain Management Devices Market would witness market growth of 7.9% CAGR during the forecast period (2020-2026).

Pain is an unpleasant sensory and emotional experience caused by damage or disease to the tissues. It is caused by injury and a variety of diseases including osteoarthritis, chronic arthritis, diabetic neuropathy, multiple sclerosis, stomach ulcer, fibromyalgia, and cancer. It can be classified as acute pain and chronic pain based on duration. Acute pain is a rapid occurrence of pain where it lasts for long stretches as persistent pain. Chronic pain is triggered mainly by aging bone and joint problems, including nerve damage and injuries.

Pain is managed by a particular set of pain treatment medicines or devices. The pain management systems include transcutaneous electrical nerve stimulators, neurostimulators, analgesic infusion pumps, and radiofrequency ablaters. Most of these devices block the mechanism of the pain gate, to prevent the passage of pain signals to the brain.

Radiofrequency ablaters destroy nerves by generating heat to suppress pain signals. Similarly, neuro-stimulator devices use mild current frequencies that prevent pain

signals from passing in. These devices help in treating various painful conditions such as cancer, musculoskeletal injury, and neuropathic pain. Pain control tools help reduce the risk of long-term narcotics, non-steroidal anti-inflammatory medicines, and other medications that ease discomfort.

Based on Product, the market is segmented into Neuromodulation & Neurostimulation Devices, Analgesic Infusion Pumps and Ablation Devices. Based on Application, the market is segmented into Neuropathic Pain, Musculoskeletal Pain, Cancer Pain, Facial & Migraine Pain and Other Applications. Based on countries, the market is segmented into U.S., Mexico, Canada, and Rest of North America.
