## Abstracts

The North America Patient Portal Market would witness market growth of 16.5% CAGR during the forecast period (2019-2025).

Electronic health records are becoming a standard; with this, hospitals began to progressively provide patients access to their information through patient portals. This kind of information is accessible to patients and the scheduling of patient access to information varies between institutions. The use of these portals is not mandatory; thus, several factors can affect patient participation in online patient portals. An increase in the number of healthcare facilities embracing patient portals boosted the growth of the patient portal market. Further, higher demand for Electronic Health Record (EHR) and mandatory federal standards are also responsible for increased use of patient portals. Such tools make patients want to return to a certain provider because portal features such as secure messaging facilitate strong relationships between patients and providers. Several healthcare professionals embrace connected health technology to help advance efforts in patient engagement. Healthcare organizations, in the context of patient satisfaction, are also looking to expand their connected health technologies. Most of these hospitals seek to expand patient-generated health data, telehealth concierge services, and text messages between patients and providers.

Based on Type, the market is segmented into Integrated and Standalone. Based on End Use, the market is segmented into Providers, Payers and Others. Based on Mode of Delivery, the market is segmented into Cloud-based and Web-based. Based on countries, the market is segmented into U.S., Mexico, Canada, and Rest of North America.
