## Abstracts

The North America Pest Control Market would witness market growth of 4.5% CAGR during the forecast period (2019-2025).

Pest control has been recognized as the first line of defense against bugs and rodents that invade home or business, destroy property, and cost damages worth hundreds or even thousands of dollars. Some pests cannot be detected easily, these include cockroaches or termites. These can stay hidden under floorboards and inside walls for longer periods of time, eating the foundation of a property and leading to costly extermination and repair bills. Since there isn't a specific way to detect if a pest is carrying a disease until it's too late, pest control can be sought after as the best way to protect home and family.

The use of several classical insecticides like organ chlorinated hydrocarbons and organophosphorus and carbamate compounds has now been limited or even cancelled as a result of more stringent regulatory controls. Therefore, a search for safer pest control alternatives is required. Intensive study is thus being carried out to achieve chemical-modified drugs with enhanced insecticidal activity in aspects of selectivity towards insects and low toxicity to the environment and to non-target species such as humans. The combination of latest synthetic approaches and biological & physiological research has led in the development of insecticides with a better environmental profile, distinct mechanisms of action, and reduced risks for living organisms.

Based on Type, the market is segmented into Chemical Based, Mechanical Based, Biological Based and Other Types. Based on Pest Type, the market is segmented into Insects, Termites, Rodents and Other Pests.
