## Abstracts

The North America Portable UV Sanitizing Boxes Market would witness market growth of 12.8% CAGR during the forecast period (2020-2026).

UV sterilization is also known as UV disinfection or ultraviolet germicidal irradiation (UVGI) works by breaking down some chemical bonds and modifying the structure of DNA, RNA and proteins, rendering it difficult for the microorganism to reproduce. If a microorganism is unable to replicate, it is considered dead because it cannot reproduce within a host and is no longer contagious.

The UV sanitization box is an automatic disinfectant chamber that sanitizes small items such as mobile phones, watches, rings, currency notes, masks, and key rings, providing protection against germs, bacteria, and viruses on the surface of objects. The UV sterilization box is a portable 9-watt Ultraviolet-C light chamber designed in a particular manner that helps to disinfect and sanitize small objects within three minutes of use. The application of UVC light at an appropriate wavelength of 260nm-280 nm helps to disinfect objects against various bacteria and viruses.

The object can be put inside the UV sanitization box by gently opening and closing the lid. When it fits into the container, the disinfection key at the front end of the box starts to disinfect until it is pressed. The UVC light inside the box penetrates the surface of the material through viruses and bacteria. Within three minutes of use, the indicator light stops flashing, which indicates that the object has been sanitized on all sides.
