The North America Serverless Architecture Market would witness market growth of 22.2% CAGR during the forecast period (2018 – 2024). Serverless architecture is a software design pattern in which applications are provided by a third-party service, thereby, eradicating the necessity for hardware management and server software by the developer. To leverage cloud-based technologies to their full potential, serverless architecture has played a revolutionary role. It has enabled enterprises to emphasize on their core products and services, rather than dealing with a load of traffic on their IT infrastructure. As a result, a user can operate an application on a third-party server thereby, reducing the time consumed in deployment..
