Abstracts

A smart elevator is the need of the hour in buildings where numerous people walk in and walk out. People do not want to waste their valuable time by waiting for an elevator in the building lobby or by boarding one, which takes longer duration than expected. Buildings constructed in recent years are taller than ever before and people find it hard to commute from one floor to another, as it is tedious and consumes lot of time. The elevator acts as the integral part of a tall building that provides both safety and efficiency to its passengers while travelling. These elevators are fast, easier to operate and more energy efficient as compared to conventional elevators.
