## **Abstracts**

The North America Software-Defined Wide Area Network (SD-WAN) Market would witness market growth of 32.1% CAGR during the forecast period (2020-2026). There is a global need for WAN optimization solutions in IT organizations to overcome the growing challenges of network performance and it also lowers their WAN cost. Software-defined wide area network solution providers are constantly putting their efforts in the improvement of their product portfolio of physical and virtual WAN optimization, it is beneficial to provide industries with enhanced application performance. The major advantages that are provided by WAN optimization solutions are greater virtual flexibility, improved user experience, cloud-ready networking infrastructure enhanced business productivity, better SaaS application performance, and secure optimization. These trends are likely to contribute to SD-WAN market growth globally.

The software-defined WAN enables the companies to form higher performance WANs that use lower-cost leased lines, thus allows businesses to wholly or partially replace the costly private WAN connection technologies like MPLS (Multi-Protocol Label Switching). Besides, Wide area networking also allows the companies to encompass their computer network for large distances and connect remote branch offices to the
