## Abstracts

The North America Surgical Imaging Market would witness market growth of 4.8% CAGR during the forecast period (2019–2025).

Surgical imaging direction utilizes real-time imaging to notice the surgical target and hence assist in difficult control and monitoring to the surgical process. The surgical imaging system has permitted the surgeons to exactly suggest the patient's anatomy during surgical processes to maintain accuracy. Surgical imaging technology makes use of a functional camera and display system that shows the in-depth location of the targeted area in surgeries. Surgical imaging requires an operating room equipped with MRI machines and CT scan with 3D sensors for surgeries of complicated organs such as brain and sinuses.

North America is one of the major markets for surgical imaging 2018 and is expected to remain dominant throughout the forecast period. This was attributed to the rise in higher adoption of the surgical imaging system, well-developed healthcare infrastructure, increase in the number of minimally invasive surgeries, wide availability of advanced surgical imaging system, and supportive reimbursement policies in the healthcare system.
