Abstracts

The North America Telepsychiatry Market would witness market growth of 18.5% CAGR during the forecast period (2020-2026).

Telemedicine is a type of healthcare facility in which services are provided by the use of technology, mainly by using audio calls or videoconferencing. Telepsychiatry is considered as a sub-segment of telemedicine that ranges from mental health solutions like therapies, for family, individual, and groups; psychiatric evaluations, medication management, and patient education. In Telepsychiatry there is either direct communication between the psychiatrist and the patient or by the help of psychiatrist who supports primary health care providers who are specialized in mental health. The increasing cases of suicide among teenagers and young adults is resulting in an increase in the need for mental health treatment. This is likely to boost the telepsychiatry market. The many advantages associated with the adoption of telepsychiatry including better continuity of care and follow-up treatments, reduction in need of transportation, almost no delays in care, and the no need to wait long hours at hospitals, are aiding in the telepsychiatry market growth. Furthermore, there is a lack of skilled professionals who are able to treat mental illness, varying regulatory scenario like the inclusion of certain compensation codes for telepsychiatry, are expected to

contribute to the telepsychiatry market growth, as it offers accessibility between the psychiatrist and patients.
