Abstracts

The North America Uveitis Treatment Market would witness market growth of 4.98% CAGR during the forecast period (2019-2025).

Iontophoresis is the use of electric current to help move molecules through the epithelium of the hydrophilic cornea, traditionally the greatest barrier to the penetration of medicines into the eye. It would potentially increase the steroid medication's bioavailability, allowing for significantly reduced dosing frequency and improved effectiveness compared to topical corticosteroids. This procedure has the advantage of not being connected to many of the needle-related complications associated with many local procedures.

Treatment of post-infectious uveitis is a medical problem for ophthalmologists. The eye is a privileged site, preserved by blood ocular barriers that restrict the penetration of systemic antimicrobials into the corresponding segment. Furthermore, intraocularly, topical and subconjunctival treatments are unable to generate adequate concentrations of the medicines. Post-infectious uveitis can result from bacteria, viruses, fungi, or protozoa. The treatment method varies widely depending on the etiology of infections.

Based on Drug Class, the market is segmented into Anti-inflammatory, Immunotherapy & Targeted Therapies, Antimicrobial Drugs and Other Drug Class. Based on Disease Type, the market is segmented into Anterior Uveitis, Posterior Uveitis, Intermediate Uveitis and Panuveitis. Based on Distribution Channel, the market is segmented into Hospital Pharmacies, Retail Pharmacies and Online stores. Based on countries, the market is segmented into U.S., Mexico, Canada, and Rest of North America.
