## Abstracts

The North America Voice Picking Solution Market would witness market growth of 13.8% CAGR during the forecast period (2019-2025). The conventional solution foresees that warehouse workers are monitoring several things at the same time, but this increases the chances of inaccurate picking and subsequent errors. A voice picking solution reduces such mistakes, because instead of looking at the screen and operating on it, a voice picking solution enables users to listen to the commands that are being transmitted through the headset. User interfaces that are operated with voice instructions enable users to make communication with the host systems by using portable headset terminals. Such interfaces guide users during their everyday routine and help users monitor and track all processes in real time. In this way, a voice picking system will improve the productivity of warehouse workers and the operational efficiency of warehouses.

Training workers through voice picking solutions is often simpler than training them through any other kind of solution. A picking solution can be programmed to provide real-time visibility to the warehouse, provide live updates on shortages, assess inventory levels, and trigger damage alerts. Therefore, voice picking solutions are often favored over traditional solutions, such as RF scanning and paper-picking procedures. Flexibility in the use of voice-based services for replenishing, loading, receiving, putting-away, and cycle counting is combined with enhanced safety and reduced adverse outcomes. It will eventually drive their adoption and boost the market growth.
