Abstracts

The animal parasiticides market was valued at US\$9.562 billion in 2018 and is anticipated to grow at a CAGR of 5.48% to reach a market size of US\$13.172 billion by 2024. The market is expected to witness lucrative growth due to the significant increase in the expenditure on animal health along with the rising adoption of pets. Increasing awareness about the animal transmitted disease and rising initiatives by the government and animal welfare association works as the driving force for the growth of the market. However stringent regulatory policies related to the approval of animal parasiticides are restraining the growth of the market.

Geographically, North America is expected to hold a significant market share owing to the highest health expenditure of the United States in addition to effective disease management owing to the pet adoption on a large scale.
