## Abstracts

The bottled water processing market was valued at US\$31.328 billion for the year 2018. Bottled water processing refers to the process of purification as well as the packaging of water for the purposes of consumption. The series of activities involved in processing bottled water are purification, bottle washing and bottling water and packaging. The process of purification of water involves membrane filtration technologies such as reverse osmosis, ultrafiltration, and microfiltration. The bottled water processing market is segmented on the basis of type, equipment, technology, and geography. In the type segment, the still water sub-segment is estimated to have a significant market share owing to the preference as well as the availability of still water globally. Geographically the Asia Pacific region is assessed to have a high market growth for the bottled water processing market due to the rapid urbanization in the region along with improvement in the food and beverage industry in the region. In North America as well as the European region it is projected that these regions will hold a significant share in the market during the forecast period owing to the early adoption of water processing technology along with the high consumption of bottled water.
