Abstracts

Canada farm equipment market is expected to US\$1,229.137 million by 2024. The increasing automation in the field of agriculture and farming along with the support from the government in the form of subsidies etc is driving the market for farm equipment. The growing population is attributing the market growth too since it leads to an increase in the demand for food. Canada subsidizes the whole farm profits margin instead of controlling the prices or revenue of different commodities. Furthermore, the increasing research and development for technological advancement in the farm equipment are also augmenting the market growth to continue in the forecasted period. However, the high cost of equipment and the growing market for used/second-hand equipment is a restraint in the growth of the market.
