## Abstracts

The collagen market is estimated to grow at a CAGR of 6.47% during the forecast period. Collagen is the most abundant protein found in the skin and various connective tissues in the body. Collagen is what forms all the structural integrity that is present in an animal's body; and is a necessary component for regeneration, healing, tissue formation, and in the general healthy well-being of an organism. There is increasing adoption of collagen-based products due to its characteristics such as gelling, emulsification, and binding of food products in which it is used. Moreover, the rising demand for convenience food and increasing awareness of collagen in the medical and healthcare industries is adding to its growth. In the medical and healthcare industry, collagen finds its use because of the growing adoption in bone grafting, tissue engineering, and dental surgeries. It is also very useful for the geriatric population, as geriatric people are more prone to diseases due to reduced immunity. The increasing vegan population and vegetarianism too fuel the demand for collagen because of its essential amino acids and nutrients which they cannot obtain from animal-sourced products. It's use as an anti-aging and skin rejuvenating ingredient, and in treatment of joint pain in the cosmetic industry has pushed the demand too. However, restrictions on the use of animal skin by the various government organizations and religious restrictions related to porcine and bovine-derived collagens are restricting the growth of the market.
