Abstracts

The dermatology devices market was valued at US\$9.112 billion in 2018 and is estimated to grow at a CAGR of 8.31% to reach a market value of US\$ 14.706 billion by 2024. The market for dermatological devices are primarily driven by the growing prevalence of skin problems like skin rash, acne and mycosis along with the increasing awareness about aesthetic procedures. Prevalence of skin allergies around the world has played a crucial role in the development for such derma treatment devices. Also, the burgeoning health care expenditure and increasing demand for non invasive cosmetic correction procedures are further fueling the demand for advanced dermatological devices like lasers and microdermabrasion. Thus, the market is anticipated to grow at a modest rate on account of its rising use in Asian countries. However complication associated with dermatological treatments is considered as the restraining factor for the growth of the market.
