Abstracts

Egypt farm equipment market is expected to reach US\$1,665.221 million by 2024. The total cultivated area represents only 3% of the total land area. The increasing population has led to the government taking into consideration agriculture development as the duty of the state. The increasing automation in the field of agriculture and farming is driving the market for farm equipment. The growing population is attributing the market growth too since it leads to an increase in the demand for food. Additionally, the scarcity of skilled labor in the agriculture and farming sector is also supporting the market demand. Furthermore, the increasing research and development for technological advancement in the farm equipment are also augmenting the market growth to continue in the forecasted period. However, the high cost of equipment and the growing market for used/second-hand equipment is a restraint in the growth of the market.
