Abstracts

The erbium market is projected to grow at a moderate compound annual growth rate during the forecast period, growing from US\$82.778 million in 2018. Erbium is a rare earth element which belongs to the lanthanide series. Erbium has its applications in halide lamps, control rods, ceramics, specialty glass, and medical equipment among others.

Erbium is used in the glass fiber of optic cables to amplify the signals passing through it. Erbium oxide is used in manufacturing infrared absorbing glass, such as safety glasses for welders and metal workers. When erbium is added to glass, it produces a pink shade to the glass and is used to give color to some imitation gems and sunglasses. Moreover, this element is used in control rods at in nuclear reactors due to neutron-absorption capabilities. Erbium oxide-based phosphors are being used in display monitors such as LED and LCDs. Erbium is used as a photographic filter to absorb infrared lights.

Growing demand for smartphones is escalating in the developing economies due to rising disposable income and better economic growth, which is stimulating the demand for display panel industry, eventually augmenting the demand for erbium worldwide. Several erbium components have healthcare applications where they are used along with yttrium garnet laser crystals for various cosmetic procedures and mild to medium depth skin resurfacing which is expected to boost the demand of erbium during the forecast period.
