Abstracts

Food deaerator market is projected to grow at a CAGR of 3.22% during the forecast period, reaching the total market size of US\$348.364 million in 2024 from US\$288.063 million in 2018. Food deaerators are machines which are used to remove the gases from the liquids. In this, the liquid is spread on a rotating disc within the high vacuum to remove the dissolved gases from the liquid. The market is expected to grow due to the increasing food and beverages industry. The increased demand for convenience food along with raising awareness about the harmful effects of dissolved gases is expected to boost the market. Increasing demand for the long shelf life of consumer durable food products is anticipated to drive the growth of the market. Government investment in food processing machinery and equipment is creating a positive opportunity for the growth of the market. Moreover, technological investment in the development of new food and beverage processing machinery is projected to grow the market. However, high maintenance and the initial cost of the equipment is expected to hinder the market. The market is segmented into type, application, function, and geography. Basis of type, the spray-tray type is expected to hold a significant share in the market owing to its large adoption in the beverage industry due to their efficiency and effectiveness. Geographically, North America is projected to be a substantial shareholder in the market during the forecasted period due to high investment in R&D and advancements in technology.
