## Abstracts

The global Breast Cancer Diagnosis market is expected to reach US\$6.333 billion by 2023 from US\$4.142 billion in 2017 growing at a CAGR of 7.33%. Breast cancer is defined as the malignant tumour formed in the tissues of the breast and has emerged as the leading cancer among women across the globe. Several tests are carried out by the doctors to diagnose the site of initiation as well as to know if the cancer has metastasised to the other body parts or not. The breast cancer market is expected to show a robust growth during the given forecast period. The growth in the market may be attributed to the rising prevalence of the breast cancer across the globe. As per Centers for Disease Control and Prevention 242,476 new cases of Female Breast Cancer were reported in 2015 with 41,523 deaths in US. Technological advancements such as introduction of hybrid imaging technique will also be augmenting the market growth during the given time. However, dearth of the skilled and trained professionals might hamper the growth of the breast cancer diagnosis market during the given time frame.

This research study examines the current market trends related to the demand, supply, and sales, in addition to the recent developments. Major drivers, restraints, and opportunities have been covered to provide an exhaustive picture of the market. The analysis presents in-depth information regarding the development, trends, and industry policies and regulations implemented in each of the geographical region. Further, the overall regulatory framework of the market has been exhaustively covered to offer stakeholders a better understanding of the key factors affecting the overall market environment.
