Abstracts

The global cardiovascular stent market was valued at US\$8.46 billion in 2017 and is projected to expand at a CAGR of 6.74% over the forecast period to reach US\$12.511 billion by 2023. A cardiovascular stent is a device in the form of a tube mesh which expands when placed in the coronary artery (which supplies blood to the heart). The stent is required to clear the arterial passage for a smooth blood flow, which would otherwise cause heart attack in case of diseased conditions such as a blockage in the artery. The increase in the adult population along with the growing cardiovascular diseases is leading to the growth of the global cardiovascular stent market.
