Abstracts

The DRAM Memory Market is projected to grow at a CAGR of 0.13% to reach US\$80.971 billion by 2024, from US\$78.679 billion in 2019. DRAM is a form of random access memory which is used in systems to provide the working memory. The key driving force of the demand for DRAM is its low cost and high capacity memory. The demand for DRAM is growing on account of simplicity of its cells as it only requires a single transistor compared to around 6 in other types of RAMs. Owing to its simplicity costs of DRAM are much lower than others, simultaneously it provides much higher level of memory.
