The global endocrine testing market is projected to grow at a CAGR of 6.64%, increasing from US\$8.215 billion in 2017 to US\$12.080 billion in 2023. Endocrine testing refers to the measuring of endocrine hormone concentration for the diagnosis of various diseases such as diabetes, hyperthyroidism, infertility etc. Endocrine hormones are secreted by various endocrine glands directly into the bloodstream and regulates body functions such as metabolism, homeostasis, stimuli response etc. and any imbalance in these hormones may lead to the development of various disorders such as diabetes, growth disorders, hyperthyroidism and a host of other hormone-related disorders. Endocrine testing market is expected to show a robust growth during the given forecast period. Sedentary lifestyles leading to the development of the stress and other related disorders such as diabetes and obesity have given a boost to the market. Introduction of easy-to-operate test kits which are user-friendly and cost-effective will also drive the market for endocrine testing during the given time frame. However, high cost of development of the technology for endocrine testing might restrain the market growth for the given forecast period.
