Abstracts

Global Food Container Market is projected to grow from US\$161.637 billion in 2016 to US\$198.062 billion in 2021, growing at a CAGR of 4.15%. Food packaging facilitates tampering resistance, protection to food and fulfills certain chemical, physical or biological needs. These containers are also used for packaging food products to keep them safe from contamination. Plastic, metal, and glass are the major raw materials used for manufacturing these containers. Pouches and bags provide benefits such as visual appeal, convenience, product differentiation, and branding awareness among others. Global food container market is driven by factors such as a rise in food production owing to increasing population, growing awareness about health and environment, regulatory requirements, and increase in disposable income among various others. However, safety issues concerned with plastic food containers combined with their high cost may inhibit the market growth.
