The global food enzymes market is expected to grow at a CAGR of 5.89% during the forecast period of 2017-2023. Food enzymes are the chemical catalysts that initiate metabolic reaction within food materials to uplift their quality. The enzymes help in simplifying the food processing steps, thus, uplifting the quality of food products. Food enzymes such as protease and lipase are added during food processing to enhance the flavours, texture and organoleptic properties of the food and beverages. Rise in the demand for processed food is expected to drive the food enzymes market during the forecast period. Furthermore, shifting trends towards healthy food coupled with the rising focus on the quality is also boosting the market for food enzymes. Technological innovation along with environment friendly manufacturing processes will further bolster the market during the given time frame. Emerging applications of the food enzymes such as protein fortification is expected to further augment the growth of the market. However, restricted temperature and pH operational range might restrain the market growth during the forecast period.
