Abstracts

The global holmium market was valued at US\$ 5.346 million in 2018 and is anticipated to grow at an impressive rate during the period 2018-2024. Holmium is a rare earth metal that has a metallic sheen and is fairly soft and malleable. Since it rapidly oxidizes in moist air, it is most commonly found in oxide form. The demand for holmium is stemming from its remarkable magnetic properties that are increasingly being utilized in a few applications like magnets, nuclear reactor rods, solid-state lasers for non-invasive medical procedures. These are the factors that are driving the demand for holmium. Holmium components are used in solid-state lasers that have microwave applications and are useful in a variety of medical and dental settings. Furthermore, these components are used as a calibration standard for optical spectrophotometers, which are available commercially. The growing investment in nuclear energy as an alternative to meet the energy demand, especially in the Asia Pacific region, will boost the demand for holmium. Moreover, the application of holmium components in lasers are useful in many surgery specialties, including urology, neurosurgery, and angioplasty and at various other medical settings is expected to boost the demand for holmium during the forecast period.
