Abstracts

The global In Vitro Fertilisation (IVF) market is expected to grow at a CAGR of 11.24% during the forecast period to reach a total market size of US\$40.348 billion by 2024, increasing from US\$21.3 billion in 2018. In vitro fertilization (IVF) involves a complex series of procedures used to treat fertility or genetic problems and assist with the conception of a child. IVF is used to treat infertility patients with Blocked or damaged fallopian tubes, male factor infertility, women with ovulation disorders, premature ovarian failure, uterine fibroids, and removed fallopian tubes and unexplained infertility.

The global IVF services market is anticipated to exhibit significant market growth during the forecast period. The growth may be attributed to the rising male and female infertility rates due to the changing lifestyle. Growing awareness and acceptance about the infertility treatment will also bolster the adoption of the In Vitro Fertilization (IVF) techniques, thus boosting the growth of the In Vitro Fertilization (IVF) market. The increasing success rate of the IVF treatments will also augment the growth of the IVF market. However, high cost of the treatment coupled with the risk associated with the In-vitro Fertilization treatment might hamper the growth of the market during the given time frame.
