Abstracts

The global paediatric Vaccine market is expected to reach US\$42.865 billion by 2023 from US\$21.144 billion in 2017 growing at a CAGR of 12.50%. Vaccination and immunization of children are essential component of modern medicine and may vary slightly depending upon the region, even though many vaccines are common. These vaccines help protect children from various diseases by helping develop immunity (protection) against diseases before they come into contact with them. Vaccines are started at early age children are at increased risk for infectious diseases because their immune systems have is yet to built up the necessary defenses to fight serious infections and diseases. The paediatric vaccine market is estimated to show a significant growth at a CAGR of XX%. The growth may be attributed to the rising awareness among people regarding the importance of immunization. Increase in government and non-government funding in research and development of the vaccines will also augment the market growth for paediatric vaccines during the given time frame. However, high cost of the immunization vaccine may hamper the growth of the market during the given time frame.
