Abstracts

Global surgical gowns market is projected to grow at a CAGR of 2.32% during the forecast period, reaching a total market size of US\$623.816 million in 2024 from US\$543.696 million in 2018. Surgical gowns are used in the operative rooms during surgery to cover the patient's body to eliminate the risk of surgical site contamination, as well as from non-sterile areas of the surgical table. One of the most important functions of surgical gowns and drapes is to prevent patients from picking up Hospital Acquired Infections (HAIs) that can be life-threatening. The growth may be attributed to the rising number of surgeries globally. Rising awareness among the people regarding hospital-acquired infections will also be a major driver for the surgical drapes and gowns market during the given forecast period. Innovations for increasing the efficiency of surgical gowns and drapes to provide better protection to patients as well as surgeons will also boost the market growth. However, reuse of surgical drapes and gowns in developing regions might hamper the growth of the market during the given time frame.
