Abstracts

The global ureteroscope market was valued at US\$961.216 million in 2018 and is anticipated to grow at a notable rate during the period 2018-2024. Ureteroscope is a small scope like a flexible instrument inserted into the bladder and ureter to diagnose and treat a variety of problems in the urinary tract. Indications for ureteroscopy have broadened from diagnostic endoscopy to various minimally invasive therapies. Technological advancements have led to broader indications while minimizing peri-operative complications resulting in efficacious access to the upper tract. Growth in the ureteroscope market is significantly driven by the rising incidence of kidney stones disorders coupled with the rising prevalence of urologic cancers. The growing prevalence of the minimally invasive procedures is playing a crucial role in augmenting the market growth during the given forecast period. Moreover, growing research and development activities in ureteroscope is expected to boost market growth. Therefore, the market is expected to show modest growth during the forecast period. However, the high cost of ureteroscope along with stringent regulatory requirements throughout the globe will restrain the growth of the market during the given time frame.
