Abstracts

The global wearable injectors market is anticipated to grow at a CAGR of 39.10% during the forecast period. Wearable injectors are also called patch pumps or patch injectors are the devices used for delivery of drugs. The device helps to deliver the drugs in a controlled manner which is faster and safer through subcutaneous tissues. Wearable injectors are user friendly and they reduce the need of multiple painful injections making it convenient for the patients. The growth of the market may be attributed to the increase in incidence of cancer and diabetes, and adoption of advanced technological products. Favourable reimbursement scenario in developed countries pertaining to wearable injectors will also augment the growth of the market during the forecast period. However, preference and availability of alternative drug delivery modes might hamper the growth of the market during the given time frame.
