## Abstracts

Global wearable injectors market is projected to grow at a CAGR of 21.20% during the forecast period, reaching a total market size of US\$5.617 billion in 2024 from US\$1.772 billion in 2018. Wearable injectors are also called patch pumps or patch injectors are the devices used for the delivery of drugs. The device helps to deliver the drugs in a controlled manner which is faster and safer through subcutaneous tissues. Wearable injectors are user-friendly and they reduce the need for multiple painful injections making it convenient for the patients. The growth of the market may be attributed to the increase in the incidence of cancer and diabetes and the adoption of advanced technological products. Favorable reimbursement scenario in developed countries pertaining to wearable injectors will also augment the growth of the market during the forecast period. However, preference and availability of alternative drug delivery modes might hamper the growth of the market during the given time frame.
