Abstracts

Graphene sensors market is projected to grow at a CAGR of 38.75% during the forecast period, reaching a total market size of US\$981.087 million in 2024 from US\$137.473 million in 2018. Graphene is a two-dimensional material made of carbon atoms. It is 200 times stronger than steel but is still lightweight and transparent. Graphene is so dense that it does not even let the smallest helium atom pass through it. Graphene is used widely in biosensors and diagnostics as it enhances the surface loading of desired biomolecules, excellent conductivity and electrode surface. It also enables the sensors to be smaller and lighter providing endless design possibilities. In comparison to traditional sensors, graphene sensors are quick and less expensive and can even detect small changes. The market for graphene sensors is driven by the increasing awareness about health and increasing use of nanotechnology in various industry verticals. Also, the various technological innovations and developments in relation to nanotechnology will also support the growth of the market.
