Abstracts

Human Microbe market is expected to grow at a CAGR of 17.05% over the forecast period to grow to US\$635.829 million by 2022, growing from US\$289.411 million in 2017. Major factors responsible for global human microbiome market growth are increasing instances of life style diseases, diarrhoeal infections, predominant changes in the life style of the global population and increase in aged population. Moreover, technological enhancements in biomedical sciences and growing research investment in technology and product sectors also impact the market growth positively. However, lack of awareness about the use and advantage of prebiotics and probiotics and government restrictions on their usage may impair the market growth. Geographically, North America would contribute considerably to the market growth of human microbes on account of the expansion of health care industry and strengthening of medical infrastructure. Moreover, increased investments by leading players will also impact the market growth. Europe is also expected to drive the market growth on account of investments by private players and government.

This research study examines the human microbiome market on the basis of various segments – by disease, by application, by product, and by geography. Major drivers, restraints, and opportunities have been mentioned to provide an exhaustive picture of the market. Furthermore, the current market trends related to the demand, supply, and sales, in addition to the recent developments, have been provided in this report. The report also analyzes key players in the human microbiome market. The report provides comprehensive forecast up to the period 2022 for various key segments, with 2016 as the base year.

The analysis presents in-depth information regarding the development, trends, and industry policies and regulations implemented in each of the geographical segments.

Moreover, the research study analyzes the overall regulatory framework of human microbiome market, offering stakeholders a better understanding of the key factors affecting the overall market environment.

The first step towards determining the human microbe market size involves identifying key players and the revenue contribution of the overall business or relevant segment aligned to the study in consideration through extensive secondary research. This also includes various studies and data published by industry associations, analyst reports, investor presentations, press releases and journals among others. Both bottom-up and top-down approaches are utilized to determine the market size of the overall market and key segments. The values obtained are correlated with the primary inputs of the key stakeholders in the human microbiome value chain, such as C-Level Executives, Directors, and Managers among others across key enterprises operating as manufacturers, suppliers, and distributors. The last phase is providing intelligence in the form of presentation, charts, graphics and other different formats helping the clients in faster and efficient understanding of the market. Under this phase complete market engineering is involved which includes analyzing the gathered data from different sources and existing proprietary datasets while using various data triangulation methods for market breakdown and forecasting.

Segments covered under the human microbiome market report are as below:

By Disease

- Diabetes
- Central Nervous System Disorders
- Cancer
- Obesity
- Others

By Application

- Therapeutic
- Diagnostic

By Product

- Medical Food
- Probiotics

Prebiotics
Supplements
Others

By Geography

Americas
North America
South America
Europe Middle East and Africa
Europe
Middle East and Africa
Asia Pacific

Key industry players profiled as part of this section are uBiome, Inc, Second Genome, and Vedanta Biosciences among other.
