## Abstracts

The laser projector market is projected to grow at a CAGR of 20.11% to reach US\$4,086.781 million by 2024, from US\$1,361.100 million in 2018. The demand for laser projectors is expected to grow during the forecast period on account of increasing adoption of laser projectors due to the various advantages it provides over the traditional lamp-based projectors, such as better contrast and color and lower running costs. However, the high initial setup costs and the availability of cost-effective alternatives will hinder the growth of the market. The Asia Pacific market will see much growth during the next five years due to the rising demand for laser projectors from countries like China and India, which is due to the improvement in the standards of living and increasing demand in the education and entertainment segments.
