Abstracts

The log management market is estimated to grow at a CAGR of 11.01% during the period 2018-2024. A log is basically a computing documentation that is automatically produced by all the software applications. Its management is important due to growing security and compliance across industries. The burgeoning adoption of digitalization across verticals is playing an important role in the rising incorporation of softwares in their existing systems, thus augmenting the demand for log management solutions to trouble shoot problems quickly. Stringent regulation and compliance requirement across industries such as BFSI and healthcare is one of the major drivers of log management market. Increasing number of network devices has led to a rise in the network complexity which, in turn, is driving the demand for log management solutions across various industries. Growing adoption of cloud-based log management solutions and big data solutions will continue to propel the growth of log management market during the forecast period. Lack of a standard log format is another restraint that is hampering the growth of log management market.
