## Abstracts

The Middle East and Africa Farm Equipment Market are expected to reach US\$18,042.951 million by 2024. Farm equipment are used in the production, harvesting, and care of the agriculture or farm produce. These equipment help in reducing the dependency on labor, improving crop quality, and reducing the time for agricultural work. The increasing automation in the field of agriculture and farming is driving the market for farm equipment. The growing population is attributing the market growth too since it leads to an increase in the demand for food. Additionally, the scarcity of skilled labor in the agriculture and farming sector is also supporting the market demand. Furthermore, the increasing research and development for technological advancement in the farm equipment are also augmenting the market growth to continue in the forecasted period. However, the high cost of equipment and the growing market for used/second-hand equipment, and the scarcity of water in the middle east region is a restraint for the market growth.
