Abstracts

Sensors and Actuators are semiconductor components designed to assess and deliver changes in the physical environment. Sensors are components which are used to measure and quantify the physical factors such as heat, humidity, pressure, and more, and convert the readings into electrical signals. Actuators are used to convert electrical signals into physical changes, such as linear or rotatory motion, or changes in heat, etc. The demand for these devices will increase during the forecast period owing to the increasing penetration of electronics around the world. Furthermore, the demand for sensors and actuators will grow with the increase in investment for manufacturing and mining automation.
