Abstracts

The neurosurgical robotics market is projected to grow at a CAGR of 14.22% during the forecast period, reaching a total market size of US\$136.764 million in 2024 from US\$61.596 million in 2018. Robotic neurosurgery offers high precision access to the complex and sensitive regions and thereby assisting in microsurgery and minimally invasive surgery. An increasing number of neurosurgeries performed globally and rising geriatric population are boosting the growth of neurosurgical robotics market. Increasing adoption of automation across the global healthcare sector and growing concentration towards negligibly invasive medical procedures for faster recovery are further contributing to the growth of the neurosurgical robot market. However, technical challenges including limited haptic feedback and design issues are restraining the adoption of robotics in the field of neurosurgery, thus negatively impacting the growth of the neurosurgical robotics market. Geographically, North America and Europe hold significant market share owing to the advances in engineering and imaging techniques in the region.
