Abstracts

The pain management drugs market was valued at US\$101.189 billion in 2018 and is anticipated to grow at a CAGR of 5.61% to reach a market size of US\$140.371 billion by 2024. The growing geriatric population suffering from pain related to joints and chronic diseases are driving the growth of the global pain management market in the forecast period. Other factors include the prevalence of chronic diseases, rising healthcare expenditures, an increase in the number of accidents and increasing surgical procedures. However, the availability of substitutes such as pain relief devices is hampering the growth of the global pain management drugs market in the forecast period.

Geographically, North America is expected to hold a significant market share owing to the highest health expenditure of the United States in addition to effective disease management owing to the prevalence of chronic diseases in this region.
