## Abstracts

The phototherapy equipment market is estimated to reach US\$770.575 million by 2024 from US\$562.730 million in 2018 growing at a CAGR of 5.38%. Phototherapy is using light for the treatment of psoriasis, vitiligo and other skin disorders. The patient's skin is exposed to a special type of light (UV light) which comes from a medical device which is referred to as the phototherapy unit. These units or phototherapy equipment consist of hand-held and table-top devices for spot treatments or contain walk-in units as well required in case of patients requiring full body treatment.
